PRESS RELEASE

Pliosaur Energy Launches Commercial Website

Release Date: 05/11/2026

Pliosaur Energy Limited is pleased to announce the commercial launch of its website, with online purchasing, one-off payments and subscription facilities now available to the public.

This is an important milestone for the company, providing a central platform to communicate our mission, technology and progress towards cleaner, more secure and accessible energy. The website reflects the values at the heart of Pliosaur Energy, including energy security, accessibility, inclusivity and environmental responsibility.

The commercial launch enables members of the public to purchase Marine Energy Certificates (MECs) and make individual sponsorship contributions, providing new ways to financially support the development of our innovative marine renewable energy technology.

Marine Energy Certificates offer individuals a way to demonstrate their support for marine renewable energy, while the sponsorship programme provides the flexibility to make one-off payments or recurring subscriptions. These contributions will help support the design, modelling, testing and engineering work needed to advance our technology.

The launch also introduces Pliosaur Energy's sponsorship programme, offering members of the public three ways to support our work: Back the Build, Contribute Your Skills, or become a Plioneer.

Those who become Plioneers will have opportunities to engage closely with the company's journey, including access to volunteering opportunities, project updates and ways to contribute to the development of our innovative renewable energy technology.

Our environmental ambition extends beyond generating clean electricity. By developing low-profile floating technology with the potential to support the collection of marine debris, we aim to combine energy innovation with greater care for our oceans. The website will share how these objectives shape our engineering work, environmental commitments and approach to responsible development.

The commercial launch of our website marks a key step in our fundraising efforts, strengthening our communications, building public engagement and advancing our wider ambition for a cleaner, more sustainable energy future.
